# PT-G7728/G7828 Quick Installation Guide

Version 2.0, April 2023

Technical Support Contact Information www.moxa.com/support

© 2023 Moxa Inc. All rights reserved.

P/N: 1802077280415

# Package Checklist

Moxa's PT-G7728/G7828 industrial rackmount switch is shipped with the following items. If any of these items are missing or damaged, please contact your customer service representative for assistance.

- 1 PT-G7728 or G7828 switch
- 2 protective caps for unused ports, 3 protective caps for unused USB ports
- 2 rackmount ears
- Quick installation guide (printed)
- Substance Disclosure Table
- Product Certificate of Quality Inspection (Simplified Chinese)
- Product Notices (Simplified Chinese)
- Warranty card

NOTE You can find information and software downloads on the relevant product pages located on Moxa's website: www.moxa.com/

#### **Default Settings**

- Default IP address: 192.168.127.253
- Default Subnet Mask: 255.255.255.0
- Default Usernames: admin, user
- Default Password: moxa

# **Panel Layouts**

#### Front Panel

- System status LEDs (from left to right) STATE LED indicator, MSTR/HEAD LED indicator, FAULT LED indicator, CPLR/Tail LED indicator, SYNC LED indicator
- 2. 2 x 10/100/1000BaseT(X) and 2 x 100/1000Base SFP ports
- 3. 100/1000Base SFP port status LEDs
- 4. 10/100/1000BaseT(X) port status LEDs
- 5. Ethernet module slot 1
- 6. Ethernet module slot 2
- 7. Ethernet module slot 3
- 8. Ethernet module slot 4
- 9. Ethernet module slot 5
- 10. Ethernet module slot 6
- 11. Power module slot 1
- 12. Power module slot 2
- 13. Grounding screw

#### Rear Panel

- 1. Console port (RJ45, RS-232)
- 2. USB storage port
- 3. System LED indicators
- 4. Module and port LED indicators
- 5. Reset button

#### Dimensions

Unit: mm (inches)

# **Ethernet Modules**

- **NOTE** The LM-7000H-2GPHR module enables the device to interact with a redundancy network using the High-Availability Seamless Redundancy (HSR) and Parallel Redundancy (PRP) protocols. To use this module, the PT-G7728 switch must have Firmware V6.2 or higher.
- **NOTE** The LM-7000H-2GPHR module is only supported in slot 5 of the PT-G7728 Series.

# **Power Modules**

# **Rack Mounting Instructions**

- 1. Elevated Operating Temperature: If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room temperature. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.
- **NOTE** In order to ensure reliable operations, please make sure the operation temperature of the environment does not exceed the spec. When mounting a rack-mounted switch with other operating units in a cabinet without forced ventilation, it is recommended that 1U of space is reserved between each rack-mounted switch and/or device. It is the responsibility of the user to ensure that the equipment is installed, operated, and used for its intended function in the manner specified by Moxa.
  - **2. Required Air Flow:** Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.
  - **3. Mechanical Loading:** Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.
  - 4. Circuit Overloading: Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.
  - Reliable Grounding: Rack-mounted equipment should be reliably grounded and should not be removed when the equipment is energized. We suggest using a conductor that is 0.75 mm<sup>2</sup> or 18

AWG and the thread diameter should be at least 3.5 mm. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g., use of power strips).

**NOTE** The rackmount ears can be installed on the front or rear of the PT-G7728/G7828 switch.

# ATTENTION

#### Safety First!

Be sure to disconnect the power cord before installing and/or wiring your Ethernet Switch. Calculate the maximum possible current in each power wire and common wire. Observe all electrical codes dictating the maximum current allowable for each wire size. If the current goes above the maximum ratings, the wiring could overheat, which can cause serious damage to your equipment.

# WARNING

This is a Class 1 laser/LED product. Do not stare directly into the laser beam.

# **Connecting the Power Inputs**

The PT-G7728/PT-G7828 switches support 4 types of power supply:

- PWR-HV-P48: one 110/220 VAC/VDC (90 to 264 VAC, 88 to 300 VDC), one 48VDC PoE power input for PoE+ ports.
- PWR-LV-P48: one 24/48 VDC (18 to 72 VDC), one 48 VDC PoE power input for PoE+ ports.
- PWR-HV-NP: one 110/220 VAC/VDC (90 to 264 VAC, 88 to 300 VDC).
- PWR-LV-NP: one 24/48 VDC (18 to 72 VDC).

For the PWR-HV-P48, the 110/220 VAC/VDC power supplies provide power to the switch. Separate 48 VDC power supplies are required to provide power to 12 PoE+ ports (50 to 57 VDC is recommended for IEEE 802.3at devices).

For the PWR-LV-P48 models, the 24/48 VDC power supplies provide power to the switch. Separate 48 VDC power supplies are required to provide power to 12 PoE+ ports (50 to 57 VDC is recommended for IEEE 802.3at devices).

In order to provide power to 24  $\ensuremath{\mathsf{PoE}}\xspace+$  ports, two power modules should be used.

For the PWR-HV-NP, the 110/220 VAC/VDC power supplies provide power to the switch.

For the PWR-LV-NP, the 24/48 VDC power supplies provide power to the switch.

# WARNING

Do not disconnect modules or wires unless power has been switched off or the area is known to be non-hazardous. The device may only be connected to the supply voltage printed next to the power input. The device is designed for operation with a Safety Extra-Low Voltage (SELV) or an isolated power supply, which means that they may only be connected to the supply voltage connections and to the signal contact with a SELV or an isolated power supply in compliance with IEC 60950-1.

# **Power Terminal Blocks**

The connection for power input and  $\ensuremath{\mathsf{PoE}}$  external power supply is on the power modules.

#### PWR-HV-P48/PWR-HV-NP

STEP 1: Insert the neutral/line (L/N/Ground) AC wires into the terminals.

STEP 2: Insert the terminal block connector into the terminal block receptor.

#### PWR-LV-P48/PWR-LV-NP

STEP 1: Insert the negative/positive (-/+) DC wires into the terminals.

STEP 2: Insert the terminal block connector prongs into the terminal block receptor.

# **PoE Power Terminal Blocks**

STEP 1: Insert the negative/positive DC wires into the -/+ terminals, respectively.

STEP 2: Insert the terminal block connector prongs into the terminal block receptor.

- **NOTE** In order to have higher levels of protection against surge, it is suggested to install a surge protector in front of the power input of the PoE powered device so that it is suitable for use in IEC 61850 conditions.
- **NOTE** In order to activate the redundant load sharing mode, install two power modules on the PT-G7728/G7828 Series and ensure they are both active.

**NOTE** The reverse power input connection will not activate the device or PoE input. In addition, the PoE will only activate when the system power input is installed on the same power unit.

## Wiring the Relay Contact

Each power module has one relay output that can provide two types of relay output. Refer to the table below for detailed information.

The relay contact is used to detect user-configured events. Two wires are attached to the relay pins with normally close and normally open options.

#### FAULT:

The relay contact of the 3-pin terminal block connector is used to detect user-configured events. The module provides normally open and normally closed circuits depending on what the user chooses. For pin definitions refer to the table below.

Relay connection	Power on state	Event trigger
NO and COM	Closed circuit	Open circuit
NC and COM	Open circuit	Closed circuit

**NOTE** When wiring the relay contact, we suggest using the cable type - AWG (American Wire Gauge) 16-24 (1.31-0.205 mm<sup>2</sup>) and the corresponding pin type cable terminals. The connector must be able to withstand torque at maximum 5 pound-inches. The rated temperature of wiring should be at least 105°C.

# Install/Remove the Ethernet Module

The Ethernet modules are hot-swappable. You have the option to mount or remove the Ethernet module while the device is operating.

The installation procedure is as follows:

- 1. Insert the Ethernet module straight into the slot.
- 2. Fasten the module to the device by tightening the 2 screws. Use a torque of 3.5 kgf-cm (0.35 Nm).

The removal procedure is as follows:

- 1. Loosen the 2 screws of the module.
- 2. Pull the module out of the slot.
- 3. Insert the dummy module into the slot in order to have better protection against dust and EMI.
- Fasten the dummy module using 2 screws. The tightening torque is 4 kgf-cm (0.40 Nm)

#### Install/Remove the Power Module

The power supply units are hot-swappable. You have the option to mount or remove the power supply units while the device is operating.

The installation procedure is as follows:

- 1. Insert the power unit straight into the slot.
- Fasten the unit to the device by tightening the 2 screws. The tightening torque is 3.5 kgf-cm (0.35 Nm)

The removal procedure is as follows:

- 1. Loosen the 2 screws of the module.
- 2. Pull the module out of the slot.
- 3. Insert the dummy module into the slot in order to have better protection against dust and EMI.
- Fasten the dummy module using 2 screws. The tightening torque is 4 kgf-cm (0.40 Nm)

**NOTE** If one of the modules is removed from the device, it is advisable to insert a dummy module in order to provide better protection against dust and EMI.

# Grounding the Moxa Industrial Rackmount Switch

Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI). Run the ground connection from the ground screw to the grounding surface prior to connecting devices.

**NOTE** Using a shielded cable achieves better electromagnetic resistance.

## **Console Port Connection**

The PT-G7728/G7828 device has one RJ45 console port (RS-232) located on the front panel. Use a RJ45-to-DB9 cable (see the cable wiring diagram below) to connect the PT-G7728/G7828's console port to your PC's COM port. You may then use a console terminal program, such as Moxa PComm Terminal Emulator, to access the console configuration utility of the PT-G7728/G7828.

KJ45 CONSOLE FOLL FINDULS
---------------------------

Pin	Description
1	DSR
2	RTS
3	-
4	TxD
5	RxD
6	GND
7	CTS
8	DTR

# **USB Storage Connection**

The USB storage port is on the rear panel of the PT-G7728/G7828 switch. (Type A connector; see the diagram below for pinout assignments). Use Moxa's ABC-02-USB automatic backup configurator to connect to the PT-G7728/G7828 USB storage port in order to perform configuration backup, firmware upgrade, or system log file backup.

Pin	Description
1	VCC (+5V)
2	D- (Data-)
3	D+ (Data+)
4	GND (Ground)

# The Reset Button

The reset button can perform two functions. One is to reset the PT-G7728/G7828 switch back to factory default settings and the other is to perform a quick back up of configuration and log files to the ABC-02-USB automatic backup configurator.

# **Reset to Factory Default Settings**

Depress the Reset button for five seconds to load the factory default settings. Use a pointed object, such as a straightened paper clip or toothpick, to depress the Reset button. When you do so, the STATE LED will start to blink about once per second. Continue to depress the STATE LED until it begins blinking more rapidly; this indicates that the button has been depressed for five seconds and you can release the Reset button to load factory default settings.

NOTE DO NOT power off the switch when loading default settings.

#### **Configuration and Log Files Back Up**

When the ABC-02-USB is connected to the PT-G7728/G7828 switch, the reset button allows for a quick back up of configuration and event logs to the ABC-02-USB. Press the reset button to start backing up the current system configuration files and event logs to the ABC-02-USB.

**NOTE** When the ABC-02 is plugged in, you cannot reset to factory default by pressing the reset button.

# **LED Indicators**

The front panel of the PT-G7728/G7828 switch contains multiple LED indicators. The function of each LED is described in the table below.

LED	Color	State	Description
			System LEDs
		On	System has passed self-diagnosis test on
			boot-up and is ready to run
			1. When the reset button is pressed for 5
	_		seconds, the LED will blink continuously
	Green		(1 time/s) until the device is reset to the
		Blinking	factory default.
STATE			<ol><li>When an ABC-02 automatic backup</li></ol>
			device is detected, the LED will blink
			slowly (1 time/2s).
	Red	On	System failed self-diagnosis on boot up.
			<ul> <li>Switch Initiate fail.</li> </ul>
			<ul> <li>Fail Firmware Checksum Fail/</li> </ul>
			Uncompressed Fail
			One of the following has happened:
			1. ABC Loading/Saving Failure
FAULT			2. The port has been disabled because the
	Red	On	ingress multicast and broadcast packets
			exceed the ingress rate limit.
			3. Incorrect loop connection in a single
			switch

LED	Color	State	Description
			4. The Ring port connection is not valid
		Off	System is in normal operation
		On	PTP function is enabled

Gigabit Ethernet	2-ports 10/100/1000BaseT(X) and 2-ports 100/1000Base SFP
Console Port	RS-232 (RJ45)
LED Indicators	PWR1, PWR2, EPS1, EPS2, STATE, SYNC, FAULT, MSTR/HEAD, CPLR/TAIL

Alarm Contact	2A @ 30 VDC		
Power Requirements			
Input Voltage	PWR-HV-P48:		
	(110/220 VDC), (110 VAC, 60 Hz), (220 VAC, 50		
	Hz), PoE: 48 VDC, 8 A (53 to 57 VDC is		
	recommended of PoE+ device)		
	PWR-LV-P48:		
	24/48 VDC, PoE: 48 VDC, 8 A (53 to 57 VDC is		
	recommended of PoE+ device)		
	PWR-HV-NP:		
	(110/220 VDC), (110 VAC, 60 Hz), (220 VAC, 50 Hz)		
	PWR-LV-NP:		
	24/48 VDC		
Operating	PWR-HV-P48:		
Voltage	(88 to 300 VDC), (90 to 264 VAC, 47 to 63 Hz), PoE:		
	46 to 57 VDC		
	PWR-LV-P48:		
	18 to 72 VDC, PoE: 46 to 57 VDC		
	PWR-HV-NP:		
	(88 to 300 VDC), (90 to 264 VAC, 47 to 63 Hz)		
	PWR-LV-NP:		
	18 to 72 VDC		
Power	PWR-HV-P48/PWR-HV-NP		
Consumption	110 VDC: 12.43 W		
(without	220 VDC: 12.87 W		
including the	110 VAC: 13.42 W		
power to	220 VAC: 14.08 W		
modules)	PWR-LV-P48/PWR-LV-NP		
	24 VDC: 12.67 W		
	48 VDC: 13.2 W		
Power	LM-7000H-4GTX: 3.63 W		
Consumption of	LM-7000H-4GPoE: 3.80 W (w/o PoE output)		
module	LM-7000H-4GSFP: 1.56 W (w/o SFP modules)		
	LM-7000H-4TX: 1.85 W		
	LM-7000H-4PoE: 1.85 W		
	LM-7000H-2GPHR: 8.1 W		
Input Current	PWR-HV-P48/PWR-HV-NP		
(without modules	110 VDC: 0.11 A		
consumption)	220 VDC: 0.06 A		
	110 VAC: 0.29 A		
	220 VAC: 0.18 A		
	PWR-LV-P48/ PWR-LV-NP		
	24 VDC: 0.53 A		
	48 VDC: 0.28 A		
Peak Inrush	PWR-HV-P48/PWR-HV-NP		
Current	110 VAC: < 10 A (t > 0.1 ms)		
	220 VAC: < 20 A (t > 0.1 ms)		
	PWR-LV-P48/PWR-LV-NP		
	24 VDC: < 20 A (t > 0.1 ms)		
	48 VDC: < 20 A (t > 0.1 ms)		
Overload Current	Present		
Protection			
Reverse Polarity	Drecent		
ite verse i blurity	Flesent		

Physical Characteristics			
Housing	IP30 protection		
Dimensions	443 x 44 x 280 mm (17.32 x 1.37 x 11.02 in)		
Weight	PT-G7728/G7828: 3.08 kg (6.78 lb)		
	LM-7000H-4GSFP: 0.30 kg (0.66 lb)		
	LM-7000H-4GTX: 0.24 kg (0.53 lb)		
	LM-7000H-4TX: 0.24 kg (0.53 lb)		
	LM-7000H-4GPoE: 0.31 kg (0.69 lb)		
	LM-7000H-4PoE: 0.31 kg (0.69 lb)		
	LM-7000H-2GPHR: 0.31 kg (0.69 lb)		
	PWR-HV-P48/PWR-LV-P48: 0.36 kg (0.79 lb)		
	PWR-HV-NP/PWR-LV-NP: 0.34 kg (0.75 lb)		
Installation	19" rack mounting		
<b>Environmental L</b>	imits		
Operating Temp.	-40 to 85°C (-40 to 185°F)		
Storage Temp.	-40 to 85°C (-40 to 185°F)		
Ambient Relative	5 to 95% (non-condensing)		
Humidity			
Note: This equipm	nent is intended for use in a Pollution Degree 2		
industrial environ	ment, and for use in overvoltage Category II		
applications. The	class of equipment is class I base on IEC 60950-1.		
Standards and C	Certifications		
Safety	UL 62368-1, EN 62368-1 (LVD)		
EMC	EN 55032/35		
EMI	CISPR 22, FCC Part 15B Class A		
EMS	IEC 61000-4-2 ESD: Contact: 8 kV; Air: 15 kV		
	IEC 61000-4-3 RS: 80MHz to 1GHz: 20 V/m		
	IEC 61000-4-4 EFT: Power: 4 kV; Signal: 4 kV		
	IEC 61000-4-5 Surge: Power 4 kV; Signal: 4 kV		
	IEC 61000-4-6 CS: 10V		
	IEC 61000-4-8 PFMF		
Note: For better of	onductive radiation immunity, it is recommended to		
use a STP cable a	nd install a surge protector at the PoE power input:		
EPS.			
Rail Traffic	EN 50121-4		
Substation	IEC 61850-3 ED2 EMC class 2, IEEE 1613 class2		
Warranty			
Warranty Period	5 years		
Details	See www.moxa.com/warranty		

# **Restricted Access Locations**

 This equipment is intended to be used in Restricted Access Locations, such as a computer room, with access limited to service personnel or users who have been instructed on how to handle the metal chassis of equipment that is very hot. The location should only be

equipment that is very hot. The location should only be accessible with a key or through a security system.

 External metal parts of this equipment are extremely hot. Before touching the equipment, you must take special precautions to protect your hands and body from serious injury.
