About Moxa

Moxa is a leading provider of edge connectivity, industrial computing, and network infrastructure solutions for enabling connectivity for the Industrial Internet of Things (IIoT). With over 30 years of industry experience, Moxa has connected more than 57 million devices worldwide and has a distribution and service network that reaches customers in more than 70 countries. Moxa delivers lasting business value by empowering industries with reliable networks and sincere service. Information about Moxa's solutions is available at www.moxa.com.

How to Contact Moxa

Tel: +886-2-8919-1230

1. Introduction

This document provides guidelines on how to configure and secure the NPort 5000 Series. The recommended steps in this document should be considered as best practices for security in most applications. It is highly recommended that you review and test the configurations thoroughly before implementing them in your production system in order to ensure that your application is not negatively impacted.

2. General System Information Basic Information About the Device

| Model | Function | Operating System | Firmware Version |
|-------------------------|-----------------------|-----------------------|------------------|
| NPort 5000A Series | General purpose | Moxa Operating System | Version 1.6 |
| NPort 5110 | General purpose | Moxa Operating System | Version 2.10 |
| NPort 5130/5150 | General purpose | Moxa Operating System | Version 3.9 |
| NPort 5200 Series | General purpose | Moxa Operating System | Version 2.12 |
| NPort 5400 Series | General purpose | Moxa Operating System | Version 3.14 |
| NPort 5600-DT Series | General purpose | Moxa Operating System | Version 2.8 |
| NPort 5600-DTL Series | Entry level | Moxa Operating System | Version 1.6 |
| NPort 5600 Series | Rackmount | Moxa Operating System | Version 3.10 |
| NPort 5000AI-M12 Series | Railway | Moxa Operating System | Version 1.5 |
| NPort IA5000 Series | Industrial automation | Moxa Operating System | Version 1.7 |
| NPort IA5000A Series | Industrial automation | Moxa Operating System | Version 1.7 |

The NPort 5000 Series is a device server specifically designed to allow industrial devices to be directly accessible from the network. Thus, legacy devices can be transformed into Ethernet devices, which then can be monitored and controlled from any network location or even the Internet. Different configurations and features are available for specific applications, such as protocol conversion, Real COM drivers, and TCP operation modes, to name a few.

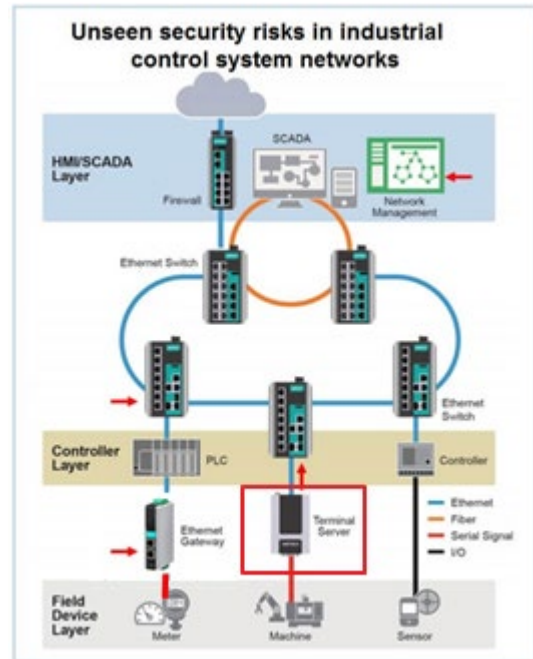

Moxa Operating System (MOS) is an embedded proprietary operating system, which is only executed in Moxa edge devices. Because the MOS operating system is not freely available, the chances of malware attacks are significantly reduced.

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

2.2. Deployment of the Device

You should deploy the NPort 5000 Series behind a secure firewall network that has sufficient security features in place to ensure that networks are safe from internal and external threats.

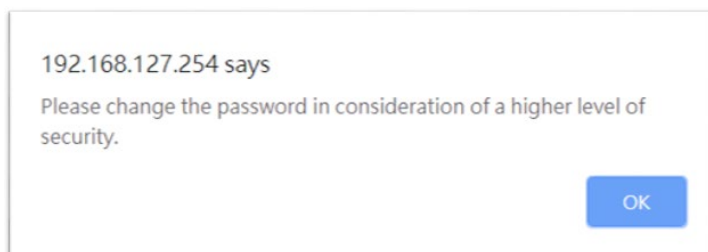

Make sure that the physical protection of the MGate devices and/or the system meets the security needs of your application. Depending on the environment and the threat situation, the form of protection can vary significantly.

3. Configuration and Hardening Information

For security reasons, account and password protection is enabled by default, so you must provide the correct account and password to unlock the device before entering the web console of the gateway.

The default account and password are **admin** and **moxa** (both in lowercase letters), respectively. Once you are successfully logged in, a pop-up notification will appear to remind you to change the password in order to ensure a higher level of security.

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

3.1. TCP/UDP Ports and Recommended Services

Refer to the table below for all the ports, protocols, and services that are used to communicate between the NPort 5000 Series and other devices.

| Service Name | Option | Default Setting | Type | Port Number | Remark & Description |
|---------------------|----------------|-----------------|------|--------------|--|
| Moxa Command (DSCI) | Enable/Disable | Enable | TCP | 14900, 4900 | For Moxa utility communication |
| | | | UDP | 4800 | |
| DNS_wins | Enable | Enable | UDP | 53, 137, 949 | Processing DNS and WINS (Client) data |
| SNMP agent | Enable/Disable | Enable | UDP | 161 | SNMP handling routine |
| HTTP server | Enable/Disable | Enable | TCP | 80 | Web console |
| HTTPS server | Enable/Disable | Enable | TCP | 443 | Secured web console |
| Telnet server | Enable/Disable | Disable | TCP | 23 | Telnet console |
| DHCP client | Enable/Disable | Disable | UDP | 68 | The DHCP client needs to acquire the system IP address from the server |
| SNTP | Enable/Disable | Disable | UDP | Random Port | Synchronize time settings with a time server This function is not available for the NPort 5100/5100A/5200/5200A Series. |
| Remote System Log | Enable/Disable | Disable | UDP | Random Port | Send the event log to a remote log server |

| Operation Mode | Option | Default Setting | Type | Port Number | Remark & Description |
|-----------------|----------------|-----------------|------|---|----------------------------------|
| Real COM Mode | Enable/Disable | Enable | TCP | 950+ (Serial port No. - 1) 966+ (Serial port No. - 1) | |
| RFC2217 Mode | Enable/Disable | Disable | TCP | User-defined (default: 4000+Serial port No.) | Only available in certain models |
| TCP Server Mode | Enable/Disable | Disable | TCP | User-defined (default: 4000+Serial port No.) User-defined (default: 966+Serial port No.) | |

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

| Operation Mode | Option | Default Setting | Type | Port Number | Remark & Description |
|-----------------------------|----------------|-----------------|------|--|----------------------------------|
| UDP Mode | Enable/Disable | Disable | UDP | User-defined (default: 4000+Serial port No.) | |
| Pair Connection Master Mode | Enable/Disable | Disable | TCP | User-defined (default: 4000+Serial port No.) | Only available in certain models |
| Pair Connection Slave Mode | Enable/Disable | Disable | TCP | User-defined (default: 4000+Serial port No.) | Only available in certain models |
| Ethernet Modem Mode | Enable/Disable | Disable | TCP | User-defined (default: 4000+Serial port No.) | |
| Reverse Telnet Mode | Enable/Disable | Disable | TCP | User-defined (default: 4000+Serial port No.) | |
| Disabled Mode | Enable/Disable | Disable | N/A | N/A | |

For security reasons, you should consider disabling unused services. After initial setup, use services with stronger security for data communication. Refer to the table below for the suggested settings.

| Service Name | Suggested Setting | Type | Port Number | Security Remark |
|---------------------|-------------------|------|--------------|---|
| Moxa Command (DSCI) | Disable | TCP | 14900, 4900 | Disable this service as it is not commonly used |
| | | UDP | 4800 | |
| DNS_wins | Enable | UDP | 53, 137, 949 | A necessary service to get IP; cannot be disabled |
| SNMP | Disable | UDP | 161 | Suggest to manage NPort via HTTPS console |
| HTTP Server | Disable | TCP | 80 | Disable HTTP to prevent plain text transmission |
| HTTPS Server | Enable | TCP | 443 | Encrypted data channel with trusted certificate for NPort configuration |
| Telnet Server | Disable | TCP | 23 | Disable this service as it is not commonly used |
| DHCP Client | Disable | UDP | 67, 68 | Assign an IP address manually for the device |
| SNTP Client | Disable | UDP | Random Port | Suggest to use the SNTP server for secure time synchronization |
| Remote System Log | Enable | UDP | Random Port | Suggest using a system log server to store all the logs from all the devices in the network |

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

For console services, we recommend the following:

| | |
|--------------|---------|
| HTTP | Disable |
| HTTPS | Enable |
| Telnet | Disable |
| Moxa Command | Disable |

To enable or disable these services, log in to the HTTP/HTTPS console and select **Basic Settings** → **Console Settings**.

Console Settings

Enable Disable
 HTTP console

Enable Disable
 HTTPS console (support TLS v1.2)

Enable Disable
 TLS v1.0/v1.1 for HTTPS console

Enable Disable
 Telnet console

Enable Disable
 Serial console

Enable Disable
 Moxa Service

Maximum Login Users For HTTP+HTTPS (1~6)

Auto Logout Setting (min) (1~1440)

No Yes
 Reset button protect

For the SNMP agent service, log in to the HTTP/HTTPS console and select **Administration** → **SNMP Agent**, select **Disable** for SNMP, and select **Disable** for the SNMP agent service.

Configuration

Enable Disable
 SNMP

(max: 31 characters)

 Read/write privacy

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

To disable the SNTP service server, log in to the HTTP/HTTPS/SSH/Telnet console and select **Basic Settings**, and keep the **Time server** setting empty. This will disable the SNTP service. Then, keep the Time server empty as **Disable** for the SNTP Server.

Time Settings

Time zone (GMT)Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▼

Time 2020 / 6 / 30 15 : 48 : 8 **Modify**

Time server

For the remote system log server, it depends on your network architecture. We recommend your network administrator to have a Log Server to receive the log messages from the device. In this case, log in to the HTTP/HTTPS/SSH/Telnet console, select **Remote Log Server**, and input the IP address of the Log Server in the **SYSLOG server** field. If your network doesn't have one, keep it empty (disable **Remote System Log Server**).

Remote Log Server

Configuration

SYSLOG server

SYSLOG facility local use 0 ▼

SYSLOG severity Emergency ▼

Submit

For the operation mode services, it depends on how you bring your serial device to the Ethernet network. For example, if your host PC uses a legacy software to open a COM port to communicate with the serial device, then the NPort will enable the Real COM mode for this application. If you don't want the NPort to provide such a service, log in to the HTTP/HTTPS/SSH/Telnet console, select **Serial Port Settings** → **Port #** → **Operation Modes**, and then select **Disable**.

Operation Modes

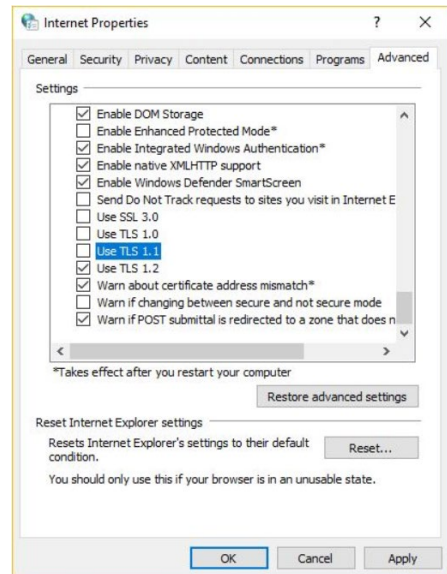

Port 1

Operation mode Disable ▼

Note: For each instruction above, click the **Submit** button to save your changes, then restart the NPort device so the new settings will take effect.

3.2. HTTPS and SSL Certificates

HTTPS is an encrypted communication channel. As TLS v1.1 or lower has severe vulnerabilities that can easily be hacked, the NPort 5000 Series uses TLS v1.2 for HTTPS to ensure data transmissions are secured. Make sure your browser has TLS v1.2 enabled.

Configuration

3.3. Account Management

- The NPort 5000 Series provides two different user levels, Read Write (admin) and Read Only (user). With a Read Write account, you can access and modify all settings through the web console. With a Read Only account, you can only view settings.
- The default Read Write account is **admin**, with the default password **moxa**. To manage accounts, log in to the web console and select **Administration → Account Management → User Account**.

User Account

 Add  Edit  Delete  Save/Restart

| Active | Account Name | User Level |
|-------------------------------------|--------------|------------|
| <input checked="" type="checkbox"/> | admin | Read Write |

- To add a new account, click **Add** in the top toolbar, then enter the Account Name, Password, Confirm Password, and select a User Level.

Add Account

Active

Account Name

Password (4-16 characters)

Confirm Password (4-16 characters)

User Level

- To modify an existing account, click on the account name and select **Edit** in the top toolbar.

Edit Account

Active

Account Name

Change Password

Password (4-16 characters)

Confirm Password (4-16 characters)

User Level

- To delete an account, click on the account name and select **Delete** in the top toolbar.
- After making any changes, click **Save/Restart** in the top toolbar.

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

Note: We suggest you manage your device with another “administrator level” account instead of using the default “admin” account, as it is commonly used by embedded systems. Once the new administrator level account has been created, it is suggested that the original “admin” account should be monitored for security reasons to prevent brute-force attacks.

User Account

User Account

[+](#) Add [✎](#) Edit [🗑](#) Delete [💾](#) Save/Restart

| Active | Account Name | User Level |
|-------------------------------------|--------------|------------|
| <input checked="" type="checkbox"/> | admin | Read Write |
| <input checked="" type="checkbox"/> | port_admin | Read Write |
| <input checked="" type="checkbox"/> | Guest | Read Only |

- To improve security, the login password policy and account login failure lockout can be configured. To configure them, log in to the HTTP/HTTPS console and select **Administration → Account Management → Password & Login Policy**.

Account Password and Login Management

Account Password Policy

Password minimum length (4 - 16)

Password complexity strength check Enable Disable

At least one digit (0-9) Enable Disable

Mixed upper and lower case letters (A-Z, a-z) Enable Disable

At least one special character (~!@#%&*~_!;,:.>[]{}()) Enable Disable

Password lifetime (0 - 180 day; 0 for Disable)

Account Login Failure Lockout

Account login failure lockout Enable Disable

Retry failure threshold (1 - 10 retry)

Lockout Time (1 - 60 min)

- You should adjust the password policy to require more complex passwords. For example, set the **Minimum length** to 16, enable all password complexity strength checks, and enable the **Password lifetime** options. Also, to avoid brute-force attack, it’s suggested that you enable the **Account login failure lockout** feature.
- For some system security requirements, a warning message may need to be displayed to all users attempting to log in to the device. To add a login message, log in to the HTTP/HTTPS console and select **Administration → Account Management → Notification Message**, and enter a **Login Message** to use.

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

Notification Message

| | | |
|--------------------------------------|--|--------------------------------------|
| Notification Message | <div style="border: 1px solid black; padding: 5px;">Welcome to Moxa NPort</div> | 21 characters/Maximum 240 characters |
| Login Message | | |
| Login Authentication Failure Message | <div style="border: 1px solid black; padding: 5px;">Please contact administration if you have forgotten your password.</div> | 66 characters/Maximum 240 characters |

3.4. Accessible IP List

- The NPort 5000 Series has a feature that can limit access to specific remote host IP addresses to prevent unauthorized access. If a host's IP address is in the accessible IP table, then the host will be allowed to access the NPort 5000 series. To configure it, log in to the HTTP/HTTPS console and select **Accessible IP List**.

Accessible IP List

- Activate the accessible IP list (Operation modes are NOT allowed for the IPs NOT on the list)
- Apply additional restrictions (All device services are NOT allowed for the IPs NOT on the list)

| No. | Activate the rule | IP Address | Netmask |
|-----|-------------------------------------|--|--|
| 1 | <input checked="" type="checkbox"/> | <input type="text" value="192.168.127.100"/> | <input type="text" value="255.255.255.0"/> |
| 2 | <input checked="" type="checkbox"/> | <input type="text" value="192.168.127.101"/> | <input type="text" value="255.255.255.0"/> |
| 3 | <input checked="" type="checkbox"/> | <input type="text" value="192.168.127.102"/> | <input type="text" value="255.255.255.0"/> |
| 4 | <input checked="" type="checkbox"/> | <input type="text" value="192.168.127.103"/> | <input type="text" value="255.255.255.0"/> |
| 5 | <input checked="" type="checkbox"/> | <input type="text" value="192.168.127.104"/> | <input type="text" value="255.255.255.0"/> |
| 6 | <input type="checkbox"/> | <input type="text"/> | <input type="text"/> |
| 7 | <input type="checkbox"/> | <input type="text"/> | <input type="text"/> |
| 8 | <input type="checkbox"/> | <input type="text"/> | <input type="text"/> |

- You may add a specific address or range of addresses by using a combination of an IP address and a netmask as follows:
 - To allow access to a specific IP address:** Enter the IP address in the corresponding field, then 255.255.255.255 for the netmask.

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

- **To allow access to a specific IP address:** Enter the IP address in the corresponding field, then 255.255.255.255 for the netmask.
- **To allow access to hosts on a specific subnet:** For both the IP address and netmask, use 0 for the last digit (e.g., “192.168.1.0” and “255.255.255.0”).
- **To allow access to all IP addresses:** Make sure that the **Enable** checkbox for the Accessible IP List is not checked.

Additional configuration examples are shown in the following table:

| Desired IP Range | IP Address Field | Netmask Field |
|--------------------------------|------------------|-----------------|
| Any host | Disable | Enable |
| 192.168.1.120 | 192.168.1.120 | 255.255.255.255 |
| 192.168.1.1 to 192.168.1.254 | 192.168.1.0 | 255.255.255.0 |
| 192.168.1.1 to 192.168.255.254 | 192.168.0.0 | 255.255.0.0 |
| 192.168.1.1 to 192.168.1.126 | 192.168.1.0 | 255.255.255.128 |
| 192.168.1.129 to 192.168.1.254 | 192.168.1.128 | 255.255.255.128 |

Warning

Ensure that the IP address of the PC you are using to access the web console is in the **Accessible IP List**.

3.5. Logging and Auditing

- These are the events that will be recorded by the NPort 5000 Series:

| Event Group | Summary |
|---------------|--|
| System | System cold start, system warm start |
| Network | DHCP/BOOTP gets IP/renew, NTP connect failed, IP conflict, Network link down |
| Configuration | Login failed, IP changed, Password changed, Firmware upgraded, Certificate imported, Configuration imported or exported, Configuration changed, Clear event logged |
| OpMode | Connect, Disconnect |

- To configure this setting, log in to the HTTP/HTTPS console and select **System Log Settings**. Then, enable the **Local Log** for recording on the NPort 5000 device and/or **Remote Log** for keeping records on a server. You should enable system log settings to record all important system events in order to monitor device status and check for security issues.

Moxa Tech Note The Security Hardening Guide for the NPort 5000 Series

System Log Settings

| Event Group | Local Log | Remote Log | Summary |
|-------------|-------------------------------------|--------------------------|--|
| System | <input checked="" type="checkbox"/> | <input type="checkbox"/> | System Cold Start, System Warm Start |
| Network | <input checked="" type="checkbox"/> | <input type="checkbox"/> | DHCP/BOOTP Get IP/Renew, NTP, Mail Fail, NTP Connect Fail, IP Conflict, Network Link Up, Network Link Down |
| Config | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Login Fail, IP Changed, Password Changed, Config Changed, Firmware Upgrade, Config Import, Config Export |
| OpMode | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Connect, Disconnect |

Submit

- To view events in the system log, log in to the HTTP/HTTPS console and select **Monitor → System Log**.

4. Patching/Upgrades

4.1. Patch Management Plan

With regards to patch management, Moxa releases version enhancements annually with detailed release notes.

4.2. Firmware Upgrades

The process for upgrading firmware is as follows:

- Download the latest firmware for your MGate device from the Moxa website:

| NPort Series | URL |
|---------------------|---|
| 5100A | https://www.moxa.com/en/products/industrial-edge-connectivity/serial-device-servers/general-device-servers/nport-5100a-series#resources |
| 5100 | https://www.moxa.com/en/products/industrial-edge-connectivity/serial-device-servers/general-device-servers/nport-5100-series#resources |
| 5200A | https://www.moxa.com/en/products/industrial-edge-connectivity/serial-device-servers/general-device-servers/nport-5200a-series#resources |
| 5200 | https://www.moxa.com/en/products/industrial-edge-connectivity/serial-device-servers/general-device-servers/nport-5200-series#resources |
| 5400 | https://www.moxa.com/en/products/industrial-edge-connectivity/serial-device-servers/general-device-servers/nport-5400-series#resources |

5. Security Information and Vulnerability Feedback

As the adoption of the Industrial IoT (IIoT) continues to grow rapidly, security has become one of the top priorities. The Moxa Cyber Security Response Team (CSRT) is taking a proactive approach to protect our products from security vulnerabilities and help our customers better manage security risks.

You can find the latest Moxa security information here:

<https://www.moxa.com/en/support/product-support/security-advisory>
